

# The skill would have caught Cyber Monday's outage by 3am, eight hours before spend came back

Review: last year's Cyber5 replayed on a simulated clock, using only data available at each step. Anonymized sample run.

03:00

Mon outage flagged on both BFCM promos

8 h

Before spend resumed at 11:00

2,531

Purchases in the 11 dark hours (00:00-10:59)

\$4.7K

Would have moved over the window (14 moves)

Monday 00:00-10:59 spent \$40 against a \$2,733 hourly average while 2,531 Meta-attributed purchases came in. The log shows 'Payment method removed' at 06:42; no cause is claimed. Black Friday night, both BFCM promos also went dark from 21:00. No top-15 ad was on sold-out products (today's stock).

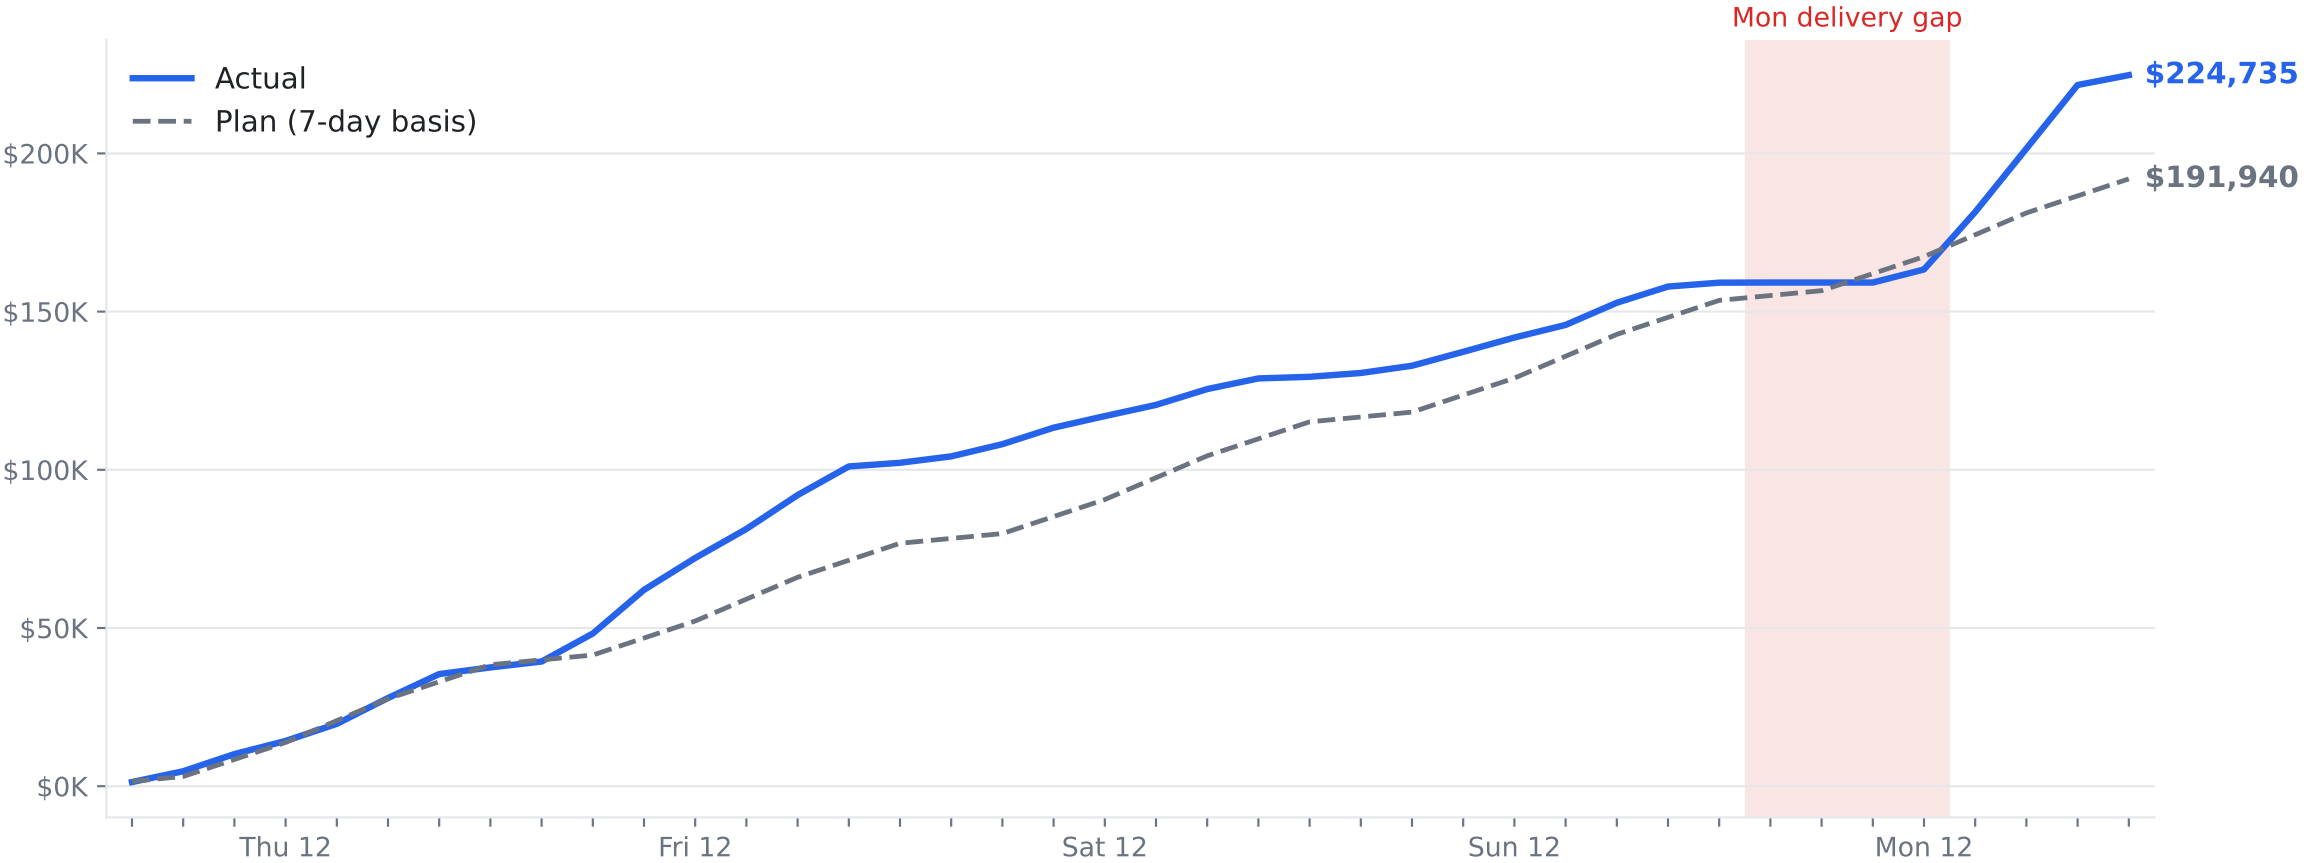

# All ten campaigns flagged by 05:00 on Cyber Monday

| Caught    | Campaign(s)                                                                 | Status      | Hours left in day | Purchases still ahead |
|-----------|-----------------------------------------------------------------------------|-------------|-------------------|-----------------------|
| Mon 02:00 | Creative Testing                                                            | Not started | 22                | 116                   |
| Mon 03:00 | BFCM ACQ Promo, BFCM RTN Promo, Bid-Cap Test                                | Not started | 21                | 8,856                 |
| Mon 04:00 | Evergreen Core, DPA Incremental, Evergreen Overflow, Category B, Category A | Not started | 20                | 3,031                 |
| Mon 05:00 | Evergreen Legacy                                                            | Not started | 19                | 326                   |
| Fri 23:00 | BFCM ACQ Promo, BFCM RTN Promo (dark since 21:00)                           | Stalled     | 1                 | 49                    |
| 4 flags   | Flagged in the same hour spend resumed                                      | False alarm | -                 | -                     |

Purchases still ahead = Meta-attributed purchases for those campaigns in the rest of the day.

# Spend ran ahead of the pre-sale plan all week, then flatlined Monday morning

Cumulative spend, 3-hour steps. Plan = each campaign's average day over Nov 20-26 (includes the early sale start on Nov 25).

# Five fixes for this year's plan

| Fix                                                                                       | Evidence                                                                                   | By     |
|-------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|--------|
| Backup payment method; spend-limit headroom; overnight \$0-spend alert for Nov 26 - Dec 1 | Mon 00:00–10:59 dark; 2,531 purchases with no ad support                                   | Nov 19 |
| Size BFCM promo ad-set budgets to last to midnight on Black Friday                        | Both promos dark from 21:00; 360 purchases through them 21:00–23:59                        | Nov 19 |
| Review the Bid-Cap Test campaign's share                                                  | Ahead of plan and Inefficient at 9 steps; window CPA \$27.28 vs \$9.09 prospecting average | Plan   |
| Give Evergreen Overflow more of the plan                                                  | Efficient and On pace or Behind at 9 steps; window CPA \$3.78                              | Plan   |
| Read morning finishes as ranges                                                           | Today's-finish error: 46% at 09:00, 21% at 15:00, 4.5% at 21:00                            | Live   |

Moves are 'would have moved', sized against the day's plan because budgets at the time can't be confirmed. They are leads, not money lost.
